

Create your very own reports

By navigating to the Bi/Analytics section in your web app you will have access to our brand new menu about custom reports. Select the Report Designer option and you will be navigated to the screen where you can now create your own reports.

On the “Select Data” screen, choose the Domain (unique for your Company) and you will be navigated to the “Choose Data” screen:

The screenshot shows the 'Data Chooser' interface with the 'Choose Data' tab selected. On the left, there is a 'Fields' sidebar with buttons for 'Pre filters', 'Display', and 'Save as Topic'. The main area is divided into two panels: 'Source' and 'Selected Fields'. The 'Source' panel lists four data groups: 'Schedule Related Data', 'Event Related Data', 'Client Related Data', and 'Company Related Data'. The 'Selected Fields' panel is currently empty. Between the panels are four directional buttons: a single right arrow, a single left arrow, a double right arrow, and a double left arrow.

In this screen you will be asked to select one of the pre-defined data groups each corresponding to a group of fields available:

This screenshot shows the same 'Data Chooser' interface, but now the 'Schedule Related Data' group is selected in the 'Selected Fields' panel. The 'Source' panel remains the same. The 'Selected Fields' panel now displays a list of fields under the 'Schedule Related Data' header: 'Branches' (with a tooltip 'Provides Data Related to Schedules'), 'Event Transactions', 'Check Points', 'Guards', 'Live Routes', 'Live Route Points', 'Routes', and 'Route Points'. The directional buttons between the panels are still present.

On your left there are all the tables that are available for you. You can use them in tables, crosstabs or even charts! Use them as filters to customize your report even more.

Select the **Chart** option to create more visual-appealing data like pie charts etc.

Navigate to the left of the screen and select the fields you want to use in your report. With a simple drag and drop you will be able to visualize your data.

You can select to use the tables as fields or measures and visualize them in columns or rows to experience a fully customized report.
