

Showing data points on a chart

- Go to the **Ad Hoc View Panel** and click on the  icon to show the **Canvas Options**
- Select the **Chart Format** option from the context menu to open the corresponding window.
- Click on the **Appearance** tab and select the **Show data points on line charts**
- Click on **Apply** and then on The name will appear along the value axis.
- Remove the data points from the chart by opening the **Appearance** tab and deselect the **Show data points on line charts**

Go to the **Advanced** tab on the **Chart Format** window to obtain more control over the appearance of your chart by allowing you to edit certain chart properties like colors, shadows, 3d graphs etc.

The image shows a screenshot of the 'Chart Format' dialog box. The 'Axis' tab is selected, and the 'Advanced' sub-tab is active. The 'X Axis' section has 'Interval between X-axis labels' set to 1 and 'Rotation of X-axis labels' set to -45. The 'Y Axis' section has 'Interval between Y-axis labels' set to 1 and 'Rotation of Y-axis labels' set to 0. At the bottom, there are 'Apply', 'OK', and 'Cancel' buttons.

Axis	Labels	Appearance	Advanced
X Axis			
Interval between X-axis labels			1
Rotation of X-axis labels			-45
Y Axis			
Interval between Y-axis labels			1
Rotation of Y-axis labels			0
